**Listing of claims:**

Claims 1-5 (canceled).

1 ~~6.~~ (currently amended): A container holding an adsorbent, said container being made of at least two laminates joined to each other, wherein each laminate comprises an ultra high molecular weight polyolefin porous film and a polytetrafluoroethylene porous film, wherein the polytetrafluoroethylene porous film has an average pore size of 0.2 to 1.5  $\mu\text{m}$  and a porosity of 60 to 95%,

~~wherein an average pore size of the ultra high molecular weight polyolefin porous film is 10 to 200  $\mu\text{m}$~~

wherein said ultra high molecular weight polyolefin porous film has a structure in which ultra high molecular weight polyolefin particles are linked together, forming pores among them, said ultra high molecular weight polyolefin particles having an average particle size of 15 to 85  $\mu\text{m}$ .

7-8. (canceled).

2 ~~9~~. (previously presented): The container according to claim ~~6~~, wherein said ultra high molecular weight polyolefin porous film is an ultra high molecular weight polyethylene porous film.

10. (canceled).

11. (canceled).

3 ~~12~~. (previously presented): The container according to claim ~~6~~, wherein said ultra high molecular weight polyolefin porous film is disposed at an interior side of said polytetrafluoroethylene porous film.

4 ~~13~~. (new): The container according to claim ~~6~~, wherein the ultra high weight polyolefin porous film comprises an ultra high weight polyethylene film having a molecular weight of 500,000 to 16,000,000.

5 ~~14~~. (new): The container according to claim ~~6~~, wherein an average pore size of the ultra high molecular weight polyolefin porous film is 10 to 200  $\mu\text{m}$
